OSMOSIS ADVANCED COS-101 MCQS 100 LEVEL.

1. Which historical development marked the transition from mechanical computation to electronic computing?

A. Use of abacus

B. Invention of Pascaline

C. Introduction of vacuum tubes

D. Development of punched cards

2. The Analytical Engine proposed by Charles Babbage was revolutionary

because it introduced the concept of:

A. Binary arithmetic

B. Stored program and control flow

C. Artificial intelligence

D. Internet connectivity

3. Which generation of computers FIRST supported both scientific and commercial data processing efficiently?

A. First generation

B. Second generation

C. Third generation

D. Fourth generation

4. In computer history, the replacement of vacuum tubes with transistors

primarily resulted in:

A. Increased heat generation

B. Larger computer sizes

C. Reduced power consumption and size
D. Elimination of programming errors

5. The defining feature that differentiates fourth-generation computers

from third-generation computers is the use of:

A. Integrated circuits

B. High-level programming languages

C. Microprocessors

D. Secondary storage devices

6. Fifth-generation computers are best characterized by their emphasis on:

A. Manual processing

B. Speed alone

C. Artificial intelligence and expert systems

D. Batch processing

7. Data becomes information when it is:

A. Stored permanently

B. Processed to have meaning

C. Printed on paper

D. Transmitted over the Internet

8. Which component of a computer system determines the sequence of operations during program execution?

A. Arithmetic Logic Unit

B. Control Unit

C. Main memory

D. Input device

9. The concept of information processing is MOST critical in which

situation?

A. Playing computer games

B. Scientific decision-making

C. Hardware manufacturing

D. Power generation

10. The Internet evolved primarily from which historical project?

A. ENIAC

B. ARPANET

C. EDVAC

D. UNIVAC

11. One major societal impact of the Internet that did NOT exist before
the digital age is:

A. Distance education

B. Global real-time collaboration

C. Postal communication

D. Business transactions

12. Which Internet application has most transformed global commerce?

A. Email

B. Social media

C. E-commerce platforms
D. Search engines

13. In information processing systems, feedback is important because it:
A. Eliminates input devices

B. Allows system correction and improvement
C. Reduces storage capacity
D. Prevents output generation

14. The application of computers in

governance (e-government) primarily aims to:

A. Increase paperwork

B. Improve transparency and efficiency

C. Replace citizens

D. Eliminate laws

15. Which of the following represents the MOST serious modern threat to computer-based information systems?

A. Power fluctuation

B. Dust

C. Cybercrime and malware

D. Keyboard failure

16. A computer virus differs from other malware because it:

A. Always damages hardware

B. Can replicate itself by attaching to programs

C. Requires Internet access

D. Is harmless to data

17. The increasing dependence on computers in society has MOST directly led to:

A. Decline in specialization

B. Emergence of new computing professions

C. Elimination of manual jobs only

D. Reduced need for education

18. Which computing professional is MOST concerned with aligning computer systems with organizational goals?

A. Programmer

B. System analyst

C. Network technician

D. Computer operator

19. The future of computing is expected to significantly depend on:

A. Manual data processing

B. Artificial intelligence and automation

C. Paper-based systems

D. Typewriters

20. Which historical factor MOST contributed to the rapid growth of personal computers?

A. Increase in vacuum tube production
B. Development of microprocessors
C. Use of punched cards
D. Magnetic drums

21. Visual Basic is classified as a high-

level programming language because it:

A. Communicates directly with hardware

B. Uses machine code instructions

C. Is user-oriented and easy to understand

D. Requires no compiler or interpreter

22. One major impact of application programming on society is that it:

A. Increases dependency on manual labor

B. Automates repetitive and complex tasks

C. Reduces problem-solving skills entirely

D. Eliminates human decision-making

23. Event-driven programming, which Visual Basic supports, means that:

A. Programs run only once

B. Execution responds to user actions

C. Programs ignore user input

D. Code runs sequentially only

24. Compared to early programming languages, Visual Basic significantly

improves productivity because it:

A. Uses only text-based interfaces

B. Supports rapid application development

C. Eliminates debugging

D. Runs without errors

25. The historical progression of programming languages reflects:

A. Increased hardware complexity for users

B. Movement from machine-oriented to

user-oriented languages

C. Elimination of software

D. Decline in application development

26. Which application area MOST relies on

real-time information processing?

A. Library management

B. Banking and online transactions

C. Word processing

D. Desktop publishing

27. A major ethical issue associated with advanced computing is:

A. Faster processing speed

B. Data privacy and security

C. Improved communication

D. Automation efficiency

28. Which generation of computers FIRST introduced operating systems that supported multiprogramming?

A. First generation

B. Second generation

C. Third generation

D. Fifth generation

29. The integration of computing into almost every profession today shows that computers are:

A. Optional tools

B. Limited to scientists
C. Central to modern societal development
D. Replacing all humans

30. The ultimate goal of future computing innovations is to:

A. Increase hardware size

B. Mimic and augment human intelligence

C. Eliminate software development

D. Return to manual systems

BEST OF LUCK!!!
